

Study a range of exciting environment-related courses at the University of Greenwich, where staff and students benefit from a vibrant culture which continually informs our teaching within the Faculty of Engineering & Science. An integral part of the Faculty, the Natural Resources Institute (NRI) is a specialist research, development and education organisation with a focus on food, agriculture, environment, and sustainable livelihoods. NRI undertakes globally recognised research to solve real-world problems, together with our national and international partners.

Based at the Medway Campus in Kent you'll find a stimulating and supportive environment for your studies, where our thorough, practical and innovative programmes are designed and taught by researchers who are leaders in their field.

With sites in Kent and south-east London, University of Greenwich students can enjoy the best of campus and city living, and explore nearby countryside and coast. There are around 2,400 accommodation places on or near our campuses which means we can guarantee accommodation in student halls for most new full-time students. Join us!
