

**UBIFRANCE, the French export-support agency, will showcase 15 companies on the French Pavilion at Ecobuild, the world's leading event for the sustainable design, construction and built-environment sector. The trade show will take place in London from 1 to 3 March 2011.**

The French Pavilion (Stand No 1220) will play host to companies that strive to achieve maximum energy savings in buildings. These French companies, which are looking for new business partners, will showcase a range of eco-friendly building solutions.

The French government has set similar low-carbon objectives to those in the UK. On top of this, France faces the added challenge of meeting the requirements of the country's eight different temperature zones. The size and climatic diversity of France means that French companies are able to offer a range of flexible products and services in eco-construction. This expertise sets French companies apart from their international counterparts and has contributed to their reputation for quality and adaptability.

The French Pavilion will offer a unique environment in which eco-friendly contractors, professional builders, remodellers, architects, landscapers, developers, distributors, supply-chain players, and designers can discover original products and find new business partners.

Companies on the French Pavilion are listed below; a catalogue with further details on each of the exhibitors is available upon request.

#### **ITR ISO 2000**

ITR ISO 2000 develops innovative products in the field of thin, reflective multilayer insulation. The company is among the leading European players in this sector, with more than four million square metres of thin insulation produced each year.

For further information, please go to: [www.itr-iso2000.com](http://www.itr-iso2000.com)

#### **Faseo**

Faseo handles the electrical engineering aspects of industrial constructions, public buildings, housing and infrastructures.

For further information, please go to: [www.faseo.fr](http://www.faseo.fr)

#### **Easychanvre**

Easychanvre has developed a building system that incorporates an innovative skill set and expertise that has been handed down through generations, along with the use of bio-sourced materials.

For further information, please go to: [www.easychanvre.fr](http://www.easychanvre.fr)

#### **Cavac Biomatériaux**

Cavac manufactures Biofib Duo, an ecological and natural insulation material, which is

specifically designed for use in homes. Cavac's solution offers high levels of sound and thermal proofing, as well as being antiallergenic and easy to install.

**Enthalpie**

Enthalpie develops, manufactures and markets a wide range of heat pumps.

For further information, please go to: [www.enthalpie.fr](http://www.enthalpie.fr)

**Amzair**

Amzair specialises in geothermal energy. The company designs and manufactures residential air-source heat pumps.

For further information, please go to: [www.amzair.eu](http://www.amzair.eu) **KDB Isolation**

KDB Isolation creates and develops sustainable insulation solutions, which offer a new way of looking at home insulation through the use of a global insulation system.

For further information, please go to: [www.kdb-isolation.com](http://www.kdb-isolation.com)

**Silvadec**

Silvadec manufactures and markets the Forexia® wood composite, a compound which is made of wood flour (70%) and polymer (30% HDPE).

For further information, please go to: [www.silvadec.com](http://www.silvadec.com)

**Amytis – Modulo Green**

Amytis – Modulo Green specialises in sustainable living walls for interiors and exteriors.

For further information, please go to: <http://amytis2.fr>

**Airwell**

The Airwell group designs and produces all types of air-conditioning equipment in Europe. This covers residential, commercial and industrial applications.

For further information, please go to: [www.airwell.com](http://www.airwell.com)

**Soleol**

Soleol specialises in eco-construction, eco-restorations and renewable energy. The company is proud of the quality of its installations and restoration work.

For further information, please go to: [www.lenergieautrement.com](http://www.lenergieautrement.com)

**Esus Housing**

Esus Housing is a specialist in house building, including heightening work and timber-frame houses.

For further information, please go to: [www.lenergieautrement.com](http://www.lenergieautrement.com)

**France GBC**

France GBC helps to raise awareness in the building sector on the environmental quality of buildings in France. France GBC is an association that aims to convey a united French position on environmental quality and standards to the international market.

For further information, please go to: [www.francegbc.fr](http://www.francegbc.fr)

**Tecosun – SARL Althea**

Tecosun – SARL Althea specialises in renewable energies, offering turnkey systems for farmers, industrialists, public-sector entities and local authorities.

For further information, please go to: [www.tecosun.fr](http://www.tecosun.fr)

**CD2E**

CD2E is a regional association based in northern France, which is dedicated to supporting and promoting the creation and development of eco-enterprises across all environmental sectors. CD2E also encourages the eco-enterprises it works with to approach export markets, and to become engaged in a range of projects to facilitate commercial relationships and partnerships.
