Waste baler specialist Riverside Waste Machinery has marked its ‘coming of age’ with the launch of more technology in 2018, than any other year. And the growth doesn’t look set to end there.

Established in 1997, Riverside thought its 20th birthday celebrations would mark the biggest milestone for the company, this decade. But 2018 – the company’s 21st year in business – has proven to be even more successful.

The team has introduced five new machines into the range over the last 12 months, including the RWM100 mid-range baler, the RWM300 and RWM500 low height balers for sites with restricted ceiling space, the RWM glass crusher and the 240litre bin press. These additions came hot on the heels of Riverside welcoming two horizontal balers into their fleet, in 2017.
