

AQE 2017, the international Air Quality and Emissions show (Telford, UK, 24th & 25th May) has partnered with IAPSC (Investigation of Air Pollution Standing Conference) to deliver the conference on the second day of the AQE event.

Administrative services for IAPSC are provided by Ricardo Energy & Environment. Their Alison Loader says: “Combining the IAPSC conference with the AQE Show will provide delegates with greater visibility of the technical solutions available for air quality monitoring, testing, analysis and treatment, whilst also creating more opportunities to discuss key issues with those at the forefront of the sector.”

The first day of AQE 2017 (www.aqeshow.com) will focus on emissions monitoring - regulations, standards, methods and technologies, and the second day will address ambient air quality monitoring and real-world emissions monitoring.

IAPSC is a twice-yearly, one-day conference aimed at organisations involved in the monitoring and management of air pollution, from local authority personnel in environmental health, pollution control and planning through to industry and academia. It provides a rare forum for delegates from across the sector to share expert insight on new developments and best practice in air quality assessment and control. The conference will feature nine expert speakers who will provide topical guidance on solutions to the challenges faced by the air quality community.

AQE 2017 organiser Marcus Pattison says: “We are delighted to be working with IAPSC; air quality is constantly in the news lately and it makes sense for events like ours to come together so that delegates can find everything they need in one place and make the best use of their time.”
