

The Carbon Savings Alliance (CSA) will be hosting a one-off Technical Workshop on RHI funded heat pump solutions in association with Kensa Heat Pumps and My Green Heating on the 14th May 2015, in Exeter.

The event is designed to demonstrate the funding models offered by both Kensa Heat Pumps and My Green Heating; Kensa recently launched the UK's first fully funded ground source heat pump solution for social housing.

The day includes presentations from the industry's leading experts on the Renewable Heat Incentive (RHI) and heat pumps, including social landlords Teign Housing and Trent & Dove, who have carried out projects using both air source heat pumps and ground source heat pumps.

A senior member of the Ofgem RHI team will also be presenting along with attendance from Regen Southwest.

Lord Taylor of Goss Moor (Chairman of the National Housing Federation) will provide the keynote speech, with the Carbon Savings Alliance's David Greensmith acting as MC.

The day's agenda is available at www.kensaheatpumps.com/event/technical-workshop-rhi-funded-heat-pump-solutions
