

The tree planting programme is carried out by 500 families

South Staffordshire College is playing a key role in helping save one of the world's tropical rainforests.

Students from the College's Rodbaston Campus have been collecting cans for Cans for Corridors, a project designed to help save the Atlantic Rainforest in Brazil and for every 50 cans recycled through the scheme, one tree is planted in the Atlantic Rainforest.

Visitors to the College's Animal Zone, based at Rodbaston Campus, have also contributed to the cause by donating money during their visits.

The money raised over the last three years will pay for 640 trees to be used in the Instituto de Pesquisas Ecológicas (Institute of Ecological Research) tree corridor planting project to rebuild the habitat of the black lion tamarin.
