

Quantitech has been appointed exclusive distributor (UK & Ireland) for Ersatec GmbH, a leading German manufacturer of gas analysers for the measurement of organic gases such as solvents and fuels.

Designed and developed by former employees of Bernath Atomic (manufacturer of the well-known Bernath 3006 FID), the Ersatec analysers employ Flame Ionisation Detectors (FIDs) to measure total organic carbon. The product range includes both continuous and semi-continuous analysers for use in a wide variety of industrial applications.

The Ersatec SmartFID instruments have internal dataloggers and are very easy to set up and run with an intuitive touchscreen. The instruments have both a low range to 10ppm and a high range to 100,000ppm, and with very low fuel consumption they offer low capital and operational costs.
