

Pegler Yorkshire's mastery of the fittings market continues with the introduction of a range extension to the XPress copper gas range, with a comprehensive new choice of sizes from 15mm to the extra large 108mm.

The range extension coincides with the publication of an all new comprehensive XPress brochure, which features the broad range of products, sizes and materials available in the XPress range include copper and stainless steel within the gas ranges; carbon, and solar fittings supported by a wide variety of accessories.

Justly one of the most popular products in the XPress range, XPress copper gas is consistently chosen for its versatility, which has been enhanced by the range extension, making it perfect for even the most demanding projects.

XPress copper can be used for both internal and external above ground 2nd and 3rd family gas services, and the new sizes allow Pegler Yorkshire to be even more competitive in the current marketplace as the only manufacturer to offer copper gas in sizes from 15mm to 108mm, with fittings available in sizes to suit all most common pipework.

“We are delighted to introduce these larger gas fittings in the XPress range,” said Pegler Yorkshire Product Manager Kathleen Bramwell. “All the products in the range offer clean, safe heat free jointing, with no need for any hot works permits or costly insurance, making them as cost effective to install as they are to specify.”

The XPress Gas range continues to use the XPress jointing technique saving time and money for installers and contractors alike.

When you factor in GL approval (formerly British Gas), a temperature rating from -20°C to 70°C (1 bar inside buildings and 5 bar outside), it is no surprise that XPress is establishing itself as the first choice when only the best will do. The industry leading 25 year guarantee is a further assurance of quality and if installed exclusively with Xpress System tubes, the installation will be deemed an XPress system and benefit from a comprehensive 30 year guarantee, demonstrating the absolute confidence Pegler Yorkshire has in one of its biggest selling flagship products.

XPress Gas fittings come permanently marked with a highly visible yellow marking stating ‘gas’ and all fittings have passed the High Temperature Leakage Rate test at 650°C for 30 minutes, ensuring peace of mind and confidence that any installation of XPress Gas has been designed for life and built to endure.

“It goes without saying that XPress has a wide range of approvals,” added Kathleen. “This,

coupled with its reputation for high performance, has seen XPress specified more than ever, particularly on large scale, public sector projects where specifying the right product first time is an essential part of the construction process and these new sizes are just one more example of Pegler Yorkshire's determination to be the ultimate one stop shop, no matter what size or type of fittings are required."

Supersize XPress Gas fittings are the latest addition to Pegler Yorkshire's established brands, just one of the 15,000 product lines that is making the Yorkshire based manufacturer unrivalled for sheer choice of quality products, backed by industry leading guarantees and fittings custom designed for every conceivable application.

Easy to use and fast to fit, XPress Gas fittings are suitable for a range of applications from domestic work, all the way through to the commercial environment and heavy industrial use – XPress is one product that lives up to its name.
