

Groundwork Pennine Lancashire is one of the largest environmental training providers in the North West. We have over 12 years experience in delivering training and run both accredited and non accredited courses in a variety of environmental subjects. All of our training consultants are active environmental practitioners who use their knowledge and experience to assist North West businesses with their environmental issues and develop new training offerings to meet their needs.

At Groundwork Pennine Lancashire we pride ourselves on being able to offer bespoke training courses at a location to suit you –whether on-site at your premises or at our dedicated training centre in Lancashire. We can even make all the arrangements to carry out the training at a third party venue of your choice.

The following courses will be run throughout 2012 but if you have a training requirement that you do not see below, please contact us on training@gwpl.co.uk and we will put together a package that meets your needs.
