

Each year the Consumer Electronics Show lights up Las Vegas with an exhilarating showcase of cutting-edge technology.

Although the Nevada desert may not be the first place you'd look for energy-efficient tech, this year we spotted an array of green gems that exhibit trends towards more efficient, versatile, and sustainable gadgets.

From universal eco chargers to multi-tasking sunglass cameras and kinetic-energy harvesting gizmos, read on for our top 5 green gadgets from CES 2011!

Lady Gaga's Polaroid Camera Sunglasses

and a high-resolution display. The glasses also feature a built-in camera and a microphone. The glasses are designed to be worn over the eyes and ears, and they are controlled by a small touchpad on the side of the temple. The glasses are also compatible with a variety of mobile devices, including smartphones and tablets. The glasses are a great example of how technology is being used to create more immersive and interactive experiences.

Lotus Evija, a red sports car, is shown in the foreground. In the background, a blue sign reads "RESERVED" and "ELECTRIC VEHICLE WIRELESS CHARGING". The sign also features a car icon and a lightning bolt symbol. The car is parked on a white tiled floor, and a blue circular light is visible on the ground in front of it. The background shows other people and displays at the event.

With a sleek design, the dock is made of high-quality materials and is designed to be a stylish addition to your desk. It is also a great way to keep your devices charged and ready to go.

Electric car: The Focus Electric from Ford is a compact hatchback with a range of 75 miles and a top speed of 90 mph. It's the only car in the world that can be charged at home.
